

SYSTEM FOR PRESERVING A LIQUID SUBSTANCE IN A FLEXIBLE
CONTAINER

A B S T R A C T

10 The invention provides a system for conserving a
liquid substance (L) in a flexible receptacle (1), said
substance being liable to be degraded and/or contaminated
on contact with ambient air, the system being
characterized in that it comprises a solid insert (3)
whose outer envelope substantially matches the inside
shape of the receptacle (1) in which the insert is
15 immersed at least in part, said insert providing
protective treatment by making contact with said
substance (L) over a large interchange area.
